

Donation of Orthodontic Practice Management Software

Ortho II is committed to the education of orthodontic residents. The opportunity to use our computer system while in school allows orthodontic students to gain insight into their practice management options before they become responsible for managing their own practices.

We are pleased to donate software to any university orthodontic department choosing to provide their students with computerized practice management experience.

Our Windows-based software, ViewPoint™, practice-proven since its release in 1998, is in use by hundreds of orthodontic practices across the country. ViewPoint has made its mark as perhaps the most feature-rich and user-friendly orthodontic practice management system on the market today. Please read below for a more detailed description of the availability of ViewPoint to orthodontic departments.

Ortho2 ViewPoint™

We believe strongly in the benefit this will provide your orthodontic program, however, to provide our system at its best, we require a commitment from your department. First, we recommend that you take advantage of our on-site training program. Our training specialists have worked extensively with other universities and know their needs differ from a private orthodontic practice, especially in regard to scheduling. Through this service we customize the software for your department. We can also provide data conversion from an existing management program. Finally, and most important, is on going support. Our donation of software requires that your department commit to an investment in *either* on-site training *or* pre-payment of the first year of support. A custom proposal will detail your investment toward this offer. Annual renewal of the *ViewPoint Software Support Agreement* includes annual enhancements, unlimited toll-free support, remote support via modem or Internet, and free continuing education classes in our Ames, Iowa office to ensure that you get the most from your system. Annual Users Group Meetings are also offered.

In order to encourage full use of ViewPoint throughout an orthodontic department's network, the annual support fee is fixed at \$2,000. For private practices, this fee increases based on the number of workstations with ViewPoint access.

Ortho2 ViewPoint does have requirements that extend beyond the proprietary software that we donate. It requires a network of Windows workstations, with SQL services. It also requires, or benefits from, Microsoft Word and Outlook, virus protection software, backup software, etc. All of these, and the associated installation, configuration and support are available from Ortho Computer Systems in order to assure optimal system performance. A general description is available in our [ViewPoint System Requirements and Specifications](#) document.

***Several universities have integrated Ortho2 ViewPoint quite successfully into their clinics.
Please call us for a list of universities currently using ViewPoint.***
